SUMMARY

I am an AI & ML student passionate about building practical, real-world technology solutions. I enjoy working with machine learning and continuously exploring emerging technologies. Eager to apply skills in practical projects and grow in a dynamic tech environment.

EXPERIENCE & LEADERSHIP

AI Forum | Lead | Bharata Mata College | *2025– Present*

- Spearheaded an AI & ML student community [Number, e.g., 50+], conducting aptitude tests to strengthen analytical and problem-solving skills.

Technical Officer | Innovation and Entrepreneurship Development Centre (IEDC) , Bharata Mata College| *2024–2025*

- Directed creative strategy and content development for entrepreneurship initiatives, strengthening campus outreach and participation.

EDUCATION

Integrated M.Sc. in Computer Science | Bharata Mata College, Thrikkakara *2023 – 2028*

- Current Semester: 6th Semester (3rd Year)
- Relevant Coursework: Data Structures & Algorithms, DBMS, Web Technologies, OS, OOP.

Higher Secondary Education (Plus Two) | GHSS N Paravur, Ernakulam *2021 - 2023*

- Score: 97% (Stream: Computer Science)

Secondary School Leaving Certificate (SSLC) | SNV Skt HSS N Paravur, Ernakulam *2021*

- Score: Full A+ (100%)

PROJECTS

Deepfake Human Detection System (Mini Project) | Python, TensorFlow/Keras, OpenCV, Streamlit

- Developed an end-to-end computer vision web application to classify digital identities (Real / GAN-Generated) using a dual-layer verification pipeline.
- Fine-tuned a MobileNetV2 CNN and integrated an OpenCV Haar Cascade pre-processing gate; achieved 94.2% validation accuracy on a 140k-image dataset and deployed with a strict-confidence threshold.

ToS Risk Analyzer | Python, FastAPI, OCR

- Built an OCR-powered permission analysis system that identifies potentially excessive or mismatched app permissions using category-driven rule logic.
- Designed backend APIs with FastAPI, structured data validation using Pydantic, and deployed the full-stack application via Uvicorn and Render.

Frontend E-Commerce Website| HTML, CSS, JavaScript

- Designed and developed a responsive e-commerce user interface with structured product layouts and reusable components.
- Focused on clean UI design, accessibility, and mobile responsiveness.

Jarvis – Voice-Activated Personal Assistant | Python, SpeechRecognition, Pyttsx3

- Developed a real-time voice assistant capable of executing hands-free web and system commands.
- Developed a voice-controlled assistant featuring wake-word detection, noise-calibrated Google Speech-to-Text, and Pyttsx3 feedback to automate YouTube, Wikipedia searches, and system task management.
